Battery chargers are used to maintain the electrical charge on a secondary cell battery. As a battery discharges, the electrolyte in the battery combines with the electrode material, causing crystal formations. Battery chargers reverse the chemical reaction which creates the crystals, thus rejuvenating the battery. ...

Information transfer between brain structures located in the medial-temporal lobe and the neocortex is essential for learning. However, the neuronal underpinnings of this transfer are unknown. Doron et al. found that neurons located in the deep layers of the perirhinal cortex exhibit increased firing after microstimulation upon learning (see
